github.com/python-developer-pk

Highly analytical and detail-oriented Python Developer with a strong foundation in Computer Science, full-stack software development, and technical instruction. Proficient in building scalable web applications, REST APIs, and database solutions using Python, FastAPI, Django, Flask, MySQL, and PostgreSQL. Experienced in applying advanced data analysis (NumPy, Pandas, Seaborn) and modern AI techniques including Large Language Models (LLMs) and Retrieval-Augmented Generation (RAG) architecture. Proven track record of producing clean, maintainable Object-Oriented code, implementing Git workflows, and instructing computer science topics.

PROFESSIONAL EXPERIENCE

Computer Instructor / Developer

2024 - 2026

Aptech — Karachi, Pakistan

- Designed and delivered comprehensive coursework in Object-Oriented Programming (OOP), MySQL database systems (GROUP BY, HAVING, complex joins), and web development.
- Engineered high-performance REST APIs and microservices in Python (FastAPI / Flask) integrated with relational databases (MySQL, PostgreSQL).
- Implemented data processing and visualization modules utilizing **Pandas**, **NumPy**, and **Seaborn** to generate analytical reporting pipelines.
- Mentored over 150+ students in version control best practices using Git/GitHub, software engineering standards, and clean code principles.

Software Developer (Full Stack)

2023 - 2024

Tech Solutions — Karachi, Pakistan

- Developed web application backends and JSON RESTful APIs using Django and Flask frameworks, ensuring high availability and secure user authentication.
- Optimized database queries, indexes, and schemas for PostgreSQL and MySQL, improving API response times by 35%.
- Collaborated in agile teams utilizing Git for branch management, code reviews, and seamless production deployments.

FEATURED PROJECTS

RAG-Powered AI Document QA & Retrieval System

- Architected a Retrieval-Augmented Generation (**RAG**) pipeline utilizing modern **LLM** architectures to enable semantic search and document querying.
- Built backend services with Python and FastAPI, serving vector store embeddings and managing structured metadata in MySQL.
- Visualized performance metrics and embedding distribution using **NumPy** and **Seaborn**.

TECHNICAL SKILLS

Job-Matched Core Skills

Python LLM RAG Seaborn
NumPy Pandas

Frameworks & APIs

FastAPI Django Flask
REST APIs JSON

Databases & OOP

PostgreSQL MySQL SQLite
OOP Principles

Tools & Version Control

Git / GitHub Linux Postman

EDUCATION

BS in Computer Science

University of Sindh / Karachi
2019 - 2023

KEY COMPETENCIES

- Problem-Solving & Logic
- Team Collaboration
- Database Optimization
- Technical Instruction

Data Analytics & Predictive Insights Dashboard

- Engineered an interactive analytics pipeline processing thousands of daily records using **Pandas** and **NumPy**.
- Generated automated statistical data visualizations with **Seaborn** for dynamic reporting.
